

## Check360-Certified Check Scanners

To use *Check360*, merchants need a certified check scanner that connects to a PC's USB port. A check scanner is a specialized piece of scanning hardware that captures images of the front and back of checks and reads the MICR line account information on the bottom of the check. The check scanner works with the *Check360* web application to create electronic deposits.

The scanner can optionally be purchased with an integrated inkjet printer that can apply deposit information to the back of checks, like deposit number and item number.
